

Extended File Viewer

The Extended File Viewer option provides system support for several different file types, when you link external files to records in the database. This option supports frequently used drawing formats, image formats, and different MS Office document formats.

By using the Extended file viewer, you can preview all linked external files in their original format in a viewing window. Without the Extended File Viewer, only PDF files can be viewed.

You can also use the "automatic printout" function for linked external files in the viewing window when handling files in formats besides PDF.

The handling of external files that are linked to records in MONITOR is streamlined by:

- Linking the files directly in their original format without having to create PDF copies of the files, and then link these.
- Not having to relink a copy of the file when the original file is updated or changed.

Commonly supported file types

Drawing files vector format 2D/3D:

Name	File extension	Version
AutoCAD	DWG, DXF	2,5-14, 2000-2018
Autodesk Inventor*	IPT, IDW, IAM	-2018
Cadkey	PRT	Part File
Solid Edge	PAR, ASM, DFT	-ST6
SolidWorks	PRT, ASM, SLDDRW	-2018

* "Autodesk Inventor View" is required.

Office format:

Name	File extension	Version
Adobe PDF**	PDF	All
MS Office	DOC, DOCX, XLS, XLSX, PPT, PPTX	-2016
Rich Text Format	RTF	All
Text File	TXT	ASCII, Unicode

** PDF is included in MONITOR G5, without having the Extended file viewer option.

Image files raster format:

Name	File extension	Version
CompuServe GIF	GIF	GIF 87a/89a
JPEG	JPG	JFIF compliant
Portable network graphics	PNG	Part File
TIFF	TIF	
Windows bitmap	BMP	

Follow the link for a complete list of all file types supported by the Extended file viewer:
